

ORACLE LEGACY INFRASTRUCTURE MODERNIZATION FOR BANKING AND CAPITAL MARKETS

How DXC helps financial leaders **balance digital transformation** with security and performance

Banking and capital markets firms are at a crossroads with their legacy Oracle environments.

Digital transformation is a strategic imperative. According to Gartner, “eighty-seven percent of senior business leaders say digitalization is a company priority and 79% of corporate strategists say it is reinventing their business.”

However, as these organizations look to cloud technologies to achieve those priorities, they must also address concerns about security, hosting sensitive data with third parties, and meeting strict uptime and regulatory requirements.

As a result, banking and financial leaders are embracing flexible options (premise-based, cloud, and hybrid) for modernizing their Oracle infrastructure. At the same time, they are looking to secure more traditional cloud benefits — reduced capital costs, flexible consumption models, and business agility and flexibility — to build the business case for modernization.

DXC Oracle transformation solution: A flexible, secure, and potentially self-funding approach for Banking and Capital Markets

DXC enables financial organizations to preserve and leverage their Oracle investment by migrating and managing Oracle custom and legacy applications on a certified cloud, hybrid or on-prem platform, all from a single provider and with a single point of accountability.

DXC’s solutions:

- ✓ **Cost-effective.** By emphasizing short-term cost removal from the legacy Oracle environment, DXC frees up resources and funding for platform modernization and helps build a business case with a compelling ROI.
- ✓ **Versatile.** DXC enables financial institutions to move to the most effective modern platform for their business — whether it’s a premise-based, cloud, or hybrid solution.
- ✓ **Secure.** Customers have the option of securing their data and infrastructure locally or deploying in the cloud. DXC employs highly redundant and secure data centers and validates their internal policies and procedures using multiple third-party auditors to achieve multiple certifications such as SOC2-Type2, PCI-DSS, HIPPA, and ISO 27001.
- ✓ **Financially flexible.** DXC partners with Oracle to create a tailored financial and operational model specific to each customer’s business requirements.
- ✓ **A platform for innovation.** DXC helps clients build and execute their long-term roadmap to leverage digital transformation and deliver emerging technologies such as AI and automation.

“Cloud computing represents one of the most valuable innovations in current IT and business strategies, but continues to be misunderstood and underutilized.”
