

Explore the power of the cloud

DXC can help you **upgrade, transform** and **optimize** your **business applications** quickly and efficiently. Our experts deliver a range of advisory, technical and business transformation assessments to help you find the clear path forward. Choose one path or choose to do both for a flat-fee, cost-effective roadmap to decide what's needed to migrate from an on-premises Microsoft Dynamics ERP or CRM solution to a cloud-based model.

Upgrade and business transformation assessments

Pick your path or choose to do both for a discounted price

- Upgrade** — Designed to uncover the optimal execution roadmap, this assessment will accelerate your move from on-premises Microsoft Dynamics ERP or CRM to a cloud-based model delivering as-is, optimized and net-new processes.
- Transform** — Focused on business strategy, this assessment will acknowledge the current state and focus on the future state across all technology applications, both technical and business transformation, to identify what's possible.
- Optimize** — Leverage these efforts for an actionable roadmap for technical and functional analysis, or transform your business with an additional implementation roadmap, initiative prioritization, sequencing improvements, project team definition and change management recommendations.

- **Implement** — Leverage our cross-functional team of Microsoft Dynamics and industry experts with a proven methodology built over 20+ years of successful delivery. With a business-first approach, we invest heavily in our industry IP and quick-start approaches to get customers live sooner and with less modification.
- **Support** — Choose from managed and customized application services plans for your post-go-live support to maximize your Microsoft Dynamics investment. Delivered by our global, cross-functional team of Dynamics experts, we've got you covered with flexible, cost-saving, monthly or annual support plans.

Ground to Cloud in 4 steps

- 1 Choose and execute an assessment
- 2 Review assessment outcomes and follow roadmap
- 3 Choose an implementation path forward
- 4 Choose a support plan
