

Three key reasons to migrate from Microsoft dynamics ax to dynamics 365

MICROSOFT HAS ANNOUNCED END-OF-SUPPORT FOR BOTH DYNAMICS AX 2012 R2 AND R3.

Plan now to move your business into the next generation of technology innovation.

A fast-paced world demands agility

Microsoft Dynamics 365 has grown by 41% in past 12 months.¹

By 2025, 40% of all ERP systems will be in the cloud, up from 18% in 2018.²

Problem

Customisations of our Dynamics AX 2012 solution are difficult to upgrade, and new regulatory requirements mean we are creating manual work-arounds to remain compliant. The end-of-life announcement for Dynamics AX means we have to do something.

Solution

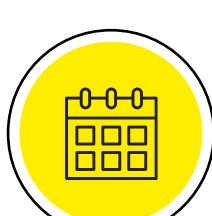

DXC is the leading global expert in Microsoft AX-to-Dynamics 365 upgrades. Our Dynamics specialist teams will show you how the new features will enable your enterprise to be more agile through advanced configuration, eliminating (or significantly reducing) your need for customisation.

Be mobile ready and secure everywhere

85% of businesses say that implementing flexible work locations has made employees more productive.³

Remote employees are able to thrive through the use of cloud ERP, freeing up an additional 1.4 days per month as compared to in-office employees.⁴

Problem

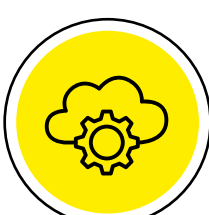

We can't access all the relevant information we need in order to do our jobs when we are working from home or with a customer. Our devices aren't supported, and even if they were, the information is not readily available or secure.

Solution

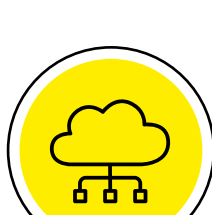

DXC will help you quickly upgrade from Dynamics AX to Microsoft Dynamics 365 in the cloud. Your implementation will be mobile-ready from day one, and fully secured because of the more than \$1 billion dollars that Microsoft invests in cyber-security each year.⁵

Reduce costs and complexity while gaining flexibility

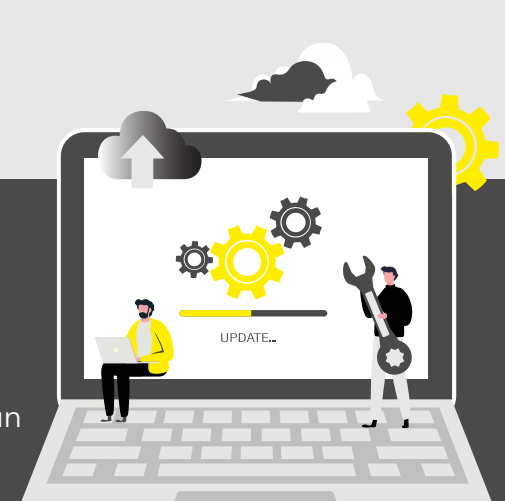

61% of technology professionals plan to focus on cloud migration within the next 12 months.⁶

By 2021, more than 50% of enterprise workloads and data are expected to be in a public cloud.⁷

Problem

Our hardware infrastructure is ageing and expensive to maintain, while software upgrades are painful and time-consuming. We frequently purchase software add-ons to make up for a lack of capabilities in our Dynamics AX solution.

Solution

DXC will help you quickly eliminate your expensive on-premises hardware with a seamless upgrade to Dynamics 365, providing an always-on environment with the most current features. DXC will also help you replace third-party add-ons by configuring the flexible features of Dynamics 365 to meet your specific needs.

DXC is your trusted partner in helping you discover how Dynamics 365 will take your business into the future. Contact us today to begin with an envisioning session. Let's build your future together.
